Automatic management of calories

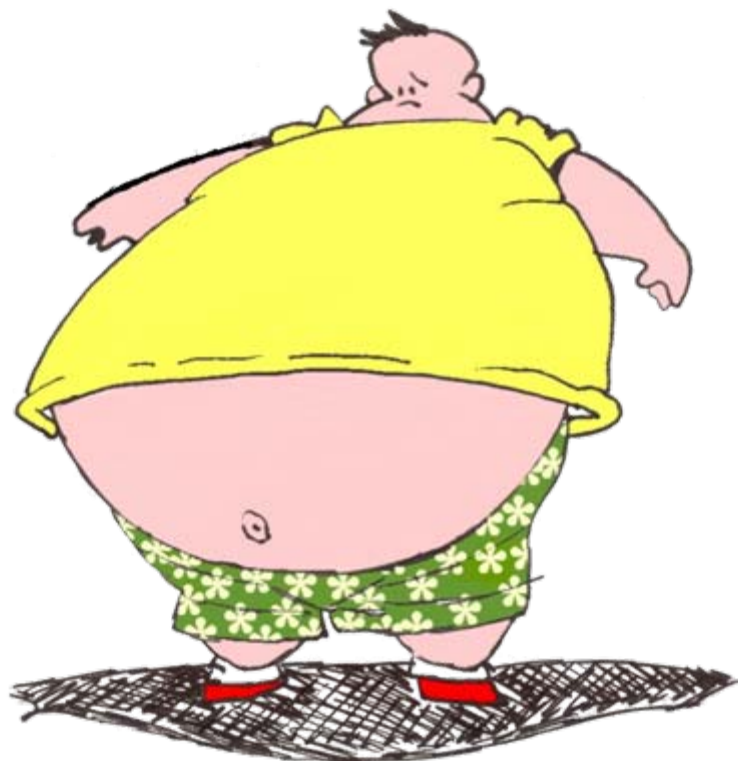

Coges has recently patented a system for the control and management of the calories consumption in food which is distributed by the vending machines.

The special function patented by Coges is based on a check and a decrease from the electronic support (key or card) not only of the selected product cost, but also of its corresponding calories.

The sale, which can be carried out only with key or card, is possible only if the support has enough money for the purchase and the number of calories available is higher or equal to the number of calories set for the selected product.
