

## ***B*** **MANUFACTURER CODES**

In order to ensure that the Serial Numbering of products does not produce equipment with duplicate numbers, e.g. Two coin mechanisms both serial number 123, or a Vending Machine Control board and a Coin Mechanism both serial number 456, it has been agreed to prefix serial numbers (and fault codes where they do not conform to the standard code) with a three letter manufacturer specific code. The following codes have been reserved for use.

The table below lists the reserved manufacturer codes at the publication date of EVA DTS 6.2.2

The full list of current manufacturer codes is available on the EVA website
